Hospital pharmacies are integral to the healthcare system, serving as the backbone for medication management within medical facilities. Their responsibilities extend far beyond simple dispensing, encompassing a broad spectrum of activities aimed at ensuring patient safety and therapeutic efficacy.

Medication Dispensing and Distribution

One of the primary functions of a hospital pharmacy is the accurate dispensing of medications prescribed by physicians. This involves:

1. Preparation of medicines in various forms (tablets, injections, infusions)
2. Ensuring correct dosage and administration routes
3. Labeling and packaging medicines appropriately
4. Maintaining meticulous records for accountability and traceability

Hospital pharmacists verify prescriptions, check for drug interactions, and ensure that medications are suitable for individual patients.

Inventory and Supply Chain Management

Hospital pharmacies maintain a vast inventory of pharmaceuticals, which requires:

1. Monitoring stock levels to prevent shortages or overstocking
2. Managing expiry dates and storage conditions
3. Coordinating with suppliers for timely procurement
4. Implementing stock rotation policies such as FIFO (First-In, First-Out)

Effective inventory management minimizes wastage and ensures availability of essential medicines.

Clinical Pharmacy Services
